Reflection Questions

1. Did your estimations reflect the actual effort?

Yes, the estimations were mostly accurate. The smaller stories took less effort, while the matching story was more complex and needed more time.

2. Was your backlog well-prioritized?

Yes. The most important features, such as reporting items, matching lost and found items, and notifying users, were given higher priority because they are the main functions of the system.

3. How did your simulated sprint align with your plan?

The sprint followed the plan well. We completed the planned stories and moved them from To Do → In Progress → Done as planned.

4. What insights did the burndown chart give about your team's capacity?

The burndown chart showed that our team was able to complete all 19 story points planned for the sprint. The remaining work decreased as the sprint progressed and reached zero by the end. This showed that the amount of work planned was manageable for our team.
